

## Town of Lake Cowichan

The Town of Lake Cowichan is launching its first Active Transportation Network Plan!

The plan will:

- Include extensive research and community feedback
- Identify priority projects, actions and policies that support and encourage walking, cycling, rolling and integration with other modes of transportation
- Will reflect the resources and character of a small, rural community

The Active Transportation Network Plan will provide a course of action that reflects our community's priorities and available resources. It will outline strategies, recommend infrastructure, policies and education to help enable and encourage active transportation as preferred modes of transportation throughout the community.

Active transportation has many advantages—primarily improved health, environmental, and social benefits.

The current online survey and mapping exercise are available on the **Active Transportation Project Page**. We want to hear from you!

Progress updates will also be shared on the **project page** so please check back regularly.
