

Memo

To: Chief Administrative Officer

Subject: Water Treatment plant

Date: November 12, 2020

From: Superintendent, Public Works, and Engineering Services

The Lake Cowichan Water Treatment Plant (WTP) is operating as originally envisioned.

We had a hard line installed for communication to the raw water pump station.

There has been a few other minor upgrades to be completed.

No water quality warnings or advisories are currently in place for the Lake Cowichan water supply. The following link is the Island Health website for up to date advisories or notices pertaining to water systems under its authority.
